

Your data is yours. The AI proposes; it never invents.

Obliffee is a compliance platform, so trust is the product. Here is exactly how your data is protected and how AI is used, in plain terms.

How your data is protected

Sign in with Microsoft Entra

Sign-in is through Microsoft Entra External ID or Google. We never see or store a password of yours, and access is per person.

One tenant can never see another

Every row is fenced to your workspace by database row-level security, not application code that could be bypassed. Colleagues can be limited to specific businesses the same way.

The database is not on the internet

The database and the AI engine sit on a private network with no public access; storage is reachable only through a private endpoint, with no access keys to leak.

Every file is scanned before it is read

An uploaded spreadsheet or spec is malware-scanned by Microsoft Defender before a byte is parsed, then deleted once processed. Only the figures we extract are kept.

A firewall against personal data

Imports read only SKUs, materials, weights and volumes. Any other column, including anything personal, is never read and never stored.

Every fact traces to its source

Each regulatory figure carries the citation and date it was read, and every data load is stamped to the exact reviewed change that produced it.

How AI is used, and where it stops

AI is used to read and to propose, never to state a fee. A model reads a packaging spec into components, or proposes a redesign; then the platform prices the result deterministically from the same cited rates that drive your dashboard.

Your data is sent to the AI provider only for the task you asked for, over an encrypted connection, and is not used to train anyone's models. Image generation runs in the EU data zone. Uploaded specs and artwork are read once and deleted; only the figures remain.

What we do not do

- We do not sell your data, to advertisers or anyone. There is no advertising in the platform.
- We do not train on your data. Your products, volumes and specs serve you, and are not fed to training.
- We do not keep your files. Uploaded documents are read once and deleted; we keep the figures, not the documents.
